PROFESSIONAL SUMMARY

Senior Frontend Engineer with 10+ years of experience building and evolving customer facing applications across AI document processing, robotics, logistics, and food delivery. Experienced in owning complex product areas from requirement clarification and technical design through implementation, testing, production debugging, and iterative improvement across product, design, and backend teams. Strong in React, Angular, and TypeScript, with hands-on experience in frontend architecture, state modelling, Nx application boundaries, reusable component systems, and frontend-heavy full-stack development with Node.js and NestJS

Frontend: React · Angular · TypeScript · JavaScript · Next.js · Nx · Redux Toolkit · NgRx · RxJS.

Backend & Data: Node.js · NestJS · Express · REST · GraphQL · MongoDB · Redis · S3/MinIO.

Quality & Tooling: Playwright · Cypress · Jest · RTL · Storybook · Docker · CI/CD · Vite · Webpack.

PROFESSIONAL EXPERIENCE

Elevait GmbH

Oct 2023 - Present

Full-Stack JavaScript Developer | Dresden, Germany

Technologies: Angular, TypeScript, Nx, NgRx, NestJS, Node.js, MongoDB, GraphDB, MinIO, Playwright, Docker

- Took frontend technical ownership of major verification, annotation, and task-management workflows for an AI-powered document-processing platform, enabling users to review and correct machine-generated annotations before validated data was consumed by downstream systems.
- Diagnosed document-listing and search bottlenecks across more than 50,000 documents, reducing response times from approximately 10–15 seconds to around 2 seconds by optimising NestJS query handling, MongoDB indexing, filtering, and pagination.
- Designed and delivered multi-annotator review workflows covering reviewer assignment, independent annotation copies, IoU-based comparison, and configurable agreement thresholds used to determine review and approval outcomes.
- Worked with product, design, and backend engineers to translate review rules including reviewer independence, agreement thresholds, approval states, and task transitions into frontend state models, API contracts, and implementable workflow behaviour.
- Designed reusable Angular/Nx feature boundaries, component structures, state-management patterns, and data-access layers for annotation, verification, and OCR workflows, reducing coupling as product complexity grew.
- Improved large-document review performance by introducing compressed preview assets through S3-compatible MinIO object storage, avoiding unnecessary loading of full-resolution document assets during normal verification workflows.
- Provided frontend technical direction through architecture discussions, code reviews, and reusable implementation patterns, while establishing Playwright E2E regression coverage.

Coboworx GmbH

Aug 2022 - Sep 2023

Senior Frontend Engineer | Dresden, Germany

Technologies: React, Redux Toolkit, TypeScript, Node.js, WebSocket, Redis, PM2, Tailwind CSS, Cypress, Storybook

- Took technical ownership of the React/TypeScript robot-control frontend, driving delivery of workflows that enabled users to configure, execute, and monitor custom robot motions while coordinating implementation across internal and external engineers.

- Designed the Redux Toolkit state architecture to separate workflow, application, and transient UI state, creating clearer ownership boundaries for complex realtime robot-control interactions.
- Improved robot-command execution and application responsiveness by scaling Node.js processes with PM2, coordinating shared command state through Redis, isolating expensive processing where required, and propagating realtime updates to the frontend over WebSockets.
- Diagnosed frontend performance bottlenecks and optimised application loading behaviour, reducing measured initial load time from approximately 5.0 seconds to 1.7 seconds.
- Mentored engineers across two external development agencies, reviewed integrations, established implementation standards, and helped maintain consistent frontend architecture and delivery quality across contributed features.
- Standardised reusable React components and shared UI patterns through Storybook and added Cypress coverage for critical robot-control workflows, improving consistency.

LoadShare Network

Apr 2018 - Jul 2022

Senior Frontend Engineer | Bangalore, India

Technologies: *React, Redux, React Hooks, TypeScript, Webpack, Node.js, Next.js*

- Served as primary frontend engineer for a logistics platform covering shipment tracking, audits, and cash-on-delivery, owning frontend delivery across product, design, and backend teams.
- Drove the modernisation of a legacy frontend into a React, Redux, and TypeScript application, introducing clearer domain boundaries, typed state models, and reusable implementation patterns to improve maintainability as the product evolved.
- Designed frontend API abstraction layers to decouple UI workflows from backend contracts, centralising data access and making backend changes easier to absorb across the application.
- Standardised reusable React hooks and shared UI patterns for filtering, pagination and error, across data-heavy operational screens, reducing duplicated implementation across features.

Swiggy

May 2016 - Mar 2018

Frontend Engineer | Bangalore, India

Technologies: *React, Redux, Webpack, Node.js, Next.js, Redis, GraphQL: Apollo Client, Push API*

- Served as primary frontend engineer for Swiggy's restaurant-vendor platform, owning key workflows as daily usage scaled from approximately 3,000 to 25,000 users.
- Developed Node.js/Express middleware integrating internal microservices, with GraphQL/Apollo for data access and Redis for caching and temporary state.
- Built worker-based order polling, self-diagnostics, and vendor notifications to detect operational issues and surface order-processing problems to restaurant partners.
- Implemented PWA capabilities using Service Workers, Push API, progressive loading.

Pipemonk (formerly ZapStitch)

Feb 2015 - Apr 2016

Junior UI Developer | Bangalore, India

Technologies: *AngularJS, JavaScript, Bootstrap, Firebase*

- Built features for cloud data-integration platform using AngularJS, JavaScript, and Bootstrap.
- Implemented responsive interfaces, A/B testing support, and Firebase analytics

EDUCATION

Aug 2008 - Apr 2012

Mahatma Gandhi University, Bachelor of Engineering in Electronics and Communication | India

LANGUAGES

English: Professional working proficiency (C1) | **German:** A2/B1 (TELC B1 preparation ongoing)
