PROFESSIONAL SUMMARY

Senior Frontend Engineer with 10+ years of experience building and evolving production applications across AI document processing, robotics, logistics, and food delivery. Proven experience owning complex frontend domains, modernising legacy systems, designing scalable state and workflow architectures, and driving measurable performance improvements including reducing document search latency from ~10–15 seconds to ~2 seconds and frontend load time from ~5.0 seconds to 1.7 seconds. Strong in React, Angular, and TypeScript, with frontend-heavy full-stack experience across Node.js, NestJS, APIs, databases, testing, production debugging, and AI-assisted engineering workflows.

Frontend: React · Angular · TypeScript · JavaScript · Next.js · Nx · Redux Toolkit · NgRx · RxJS.

Backend & Data: Node.js · NestJS · Express · REST · GraphQL · MongoDB · Redis · S3/MinIO.

Quality & Tooling: Playwright · Cypress · Jest · Storybook · Docker · CI/CD · Vite · Webpack · Cursor

PROFESSIONAL EXPERIENCE

Elevait GmbH

Oct 2023 - Present

Full-Stack Typescript Developer | Dresden, Germany

Technologies: Angular, TypeScript, Nx, NgRx, NestJS, Node.js, MongoDB, GraphDB, MinIO, Playwright, Docker, Cursor, Codex

- **Owned core document-verification, annotation, and task-management workflows for an AI-powered document-processing platform**, enabling annotators and reviewers to inspect, correct, and approve machine-generated document annotations before validated data was consumed by downstream customer systems.
- **Designed and delivered multi-annotator review workflows** supporting reviewer assignment, independent annotation copies, IoU-based comparison, configurable agreement thresholds, and approval decisions for human-in-the-loop document validation.
- **Reduced document search and listing latency** across datasets exceeding 50,000 documents from approximately 10–15 seconds to around 2 seconds by optimising NestJS query handling, MongoDB indexing, filtering, and pagination.
- **Translated complex review rules into frontend state models, API contracts, and workflow behaviour**, working across product, design, and backend teams to model reviewer independence, agreement thresholds, approval states, and task transitions.
- Designed modular Angular/Nx architecture across verification, annotation, OCR, and task-management domains, establishing clearer feature, state-management, component, and data-access boundaries as product complexity increased.
- Improved large-document verification performance by introducing compressed preview assets backed by S3-compatible MinIO storage, preventing full-resolution document assets.
- Provided frontend technical direction through architecture discussions, code reviews, reusable implementation patterns, and Playwright E2E coverage for critical document-review.

Coboworx GmbH

Aug 2022 - Sep 2023

Senior Frontend Engineer | Dresden, Germany

Technologies: React, Redux Toolkit, TypeScript, Node.js, WebSocket, Redis, PM2, Tailwind CSS, Cypress, Storybook

- **Owned the React/TypeScript architecture and delivery of a production robot-control application**, enabling operators to configure, execute, and monitor custom robot-motion workflows while coordinating implementation across internal and external engineers.

- **Designed the Redux Toolkit state architecture for complex realtime robot-control interactions**, separating workflow, application, and transient UI state to establish clearer ownership and more predictable application behaviour.
- **Improved robot-command processing and realtime application** responsiveness by scaling Node.js processes with PM2, coordinating shared command state through Redis, isolating expensive processing where required, and propagating updates to frontend via WebSockets.
- Reduced measured initial application load time from approximately 5.0 seconds to 1.7 seconds by diagnosing frontend performance bottlenecks and optimising loading behaviour.
- Provided technical leadership to engineers across two external development agencies, reviewing integrations, establishing implementation standards, and maintaining consistent frontend architecture and delivery quality across contributed features.
- Standardised reusable React components and shared interaction patterns through Storybook, while adding Cypress coverage for critical robot-control workflows.

LoadShare Network

Apr 2018 - Jul 2022

Senior Frontend Engineer | Bangalore, India

Technologies: *React, Redux, React Hooks, TypeScript, Webpack, Node.js, Next.js*

- **Served as the primary frontend engineer for an operational logistics platform spanning shipment tracking, audits, and cash-on-delivery workflows**, owning frontend delivery across product, design, backend, and engineering teams.
- **Led the modernisation of a legacy frontend into a React, Redux, and TypeScript application**, introducing clearer domain boundaries, typed state models, and reusable implementation patterns as the platform evolved.
- Designed frontend API and data-access abstractions that decoupled UI workflows from backend contracts, centralising integration logic and making backend API changes easier to absorb across the application.
- Established typed Redux state, selectors, and domain models for shipment, audit, and cash-on-delivery workflows, creating clearer boundaries between server data, workflow state, and presentation concerns.
- Standardised reusable React hooks and shared UI patterns for filtering, pagination, loading, error, and empty states across data-heavy operational screens.

Swiggy

May 2016 - Mar 2018

Frontend Engineer | Bangalore, India

Technologies: *React, Redux, Webpack, Node.js, Next.js, Redis, GraphQL: Apollo Client, Push API*

- **Served as primary frontend engineer** for Swiggy's restaurant-vendor platform, owning key workflows as daily usage scaled from approximately 3,000 to 25,000 users.
- **Developed Node.js/Express middleware** integrating internal microservices, with GraphQL/Apollo for data access and Redis for caching and temporary state.
- Built worker-based order polling, self-diagnostics, and vendor notifications to detect issues.

Pipemonk (formerly ZapStitch)

Feb 2015 - Apr 2016

Junior UI Developer | Bangalore, India

Technologies: *AngularJS, JavaScript, Bootstrap, Firebase*

- Built features for cloud data-integration platform using AngularJS, JavaScript, and Bootstrap.
- Implemented responsive interfaces, A/B testing support, and Firebase analytics

EDUCATION

Aug 2008 - Apr 2012

Mahatma Gandhi University, Bachelor of Engineering in Electronics and Communication | India

LANGUAGES

English: Professional working proficiency (C1) | **German:** A2/B1 (TELC B1 preparation ongoing)
